

IONIZED AIR RINSER VAC

APPLICATIONS

Dairy Cups

Solar Panels

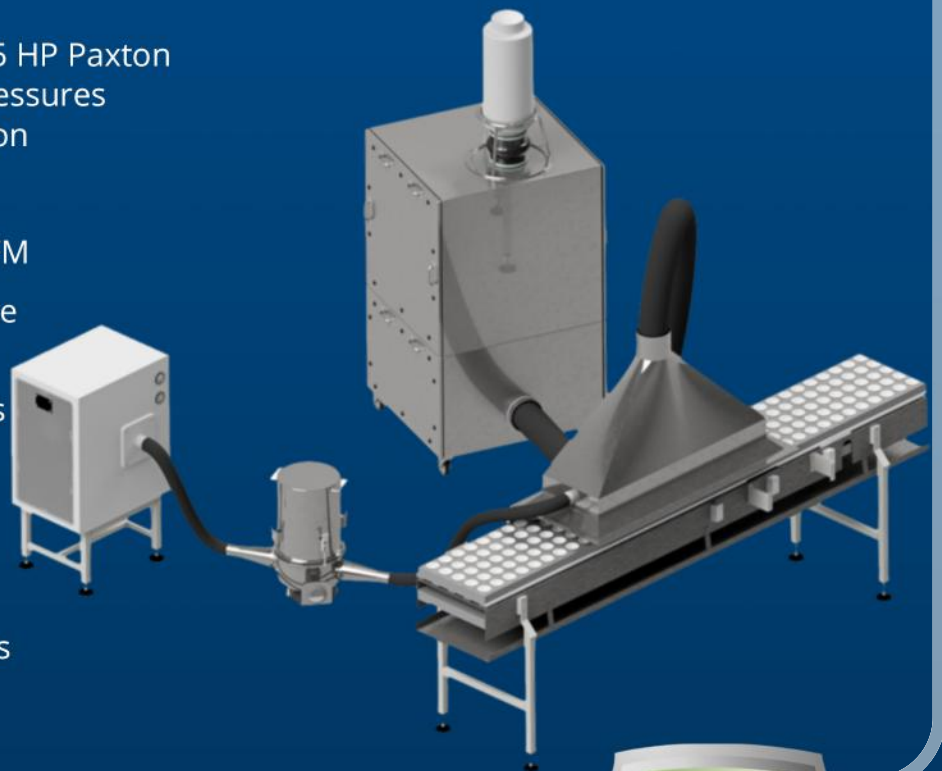

Electronics

Snack Trays

Other applications where powder
and dust need to be removed

FEATURES

- Self-contained system using a 3 or 5 HP Paxton PX-series blower, with flows and pressures engineered to the specific application
- 10 HP vacuum fan
- Vacuum Flow Rate: 2300 to 2500 CFM
- HEPA filtration available for sensitive applications
- Easy Inspection of dust, particulates and debris removed
- Rinsing and vacuum in compact footprint
- 304 Stainless steel design of air delivery devices, vacuum enclosures and filter housing

IONIZED AIR RINSER VAC

Maximize cleaning performance for up-right containers

The Ionized Air Rinsers Vac by Paxton Products efficiently removes dust, particulates and debris using powerful ionization and vacuum coupled with Paxton's industry-leading centrifugal blower, air system and industrial fan.

The Ionized Air System is a total solution for removing, capturing and disposing of dust and debris from your product.

- Ionized air flow neutralizes static charges to release unwanted contaminants from inside and outside of container walls or other surfaces and a vacuum removes the contaminants.
- Prevents re-deposition of dust and particulates
- Powerful Paxton Blower blasts contaminants away
- Specifically designed for applications and containers that will not be inverted during cleaning process
